Research Highlights

Epigenetics: Transcriptional memory remodelled

p323

Evolution: Colour vision for mice

p324

In the news

Glowing gnats Malaria's downfall

p324

Technology: Driving out insect-borne pathogens

p324

In brief

Human disease | Epigenetics | Genomics | Transcriptomics

p325

Circadian genetics: Setting the pace: three's company

p326

Cancer genetics: Micro enhancement
In brief

Technology | Sociogenomics | RNA world | Human disease

RNA world: Dicer in the mammalian female germ line

Genome evolution: How old are Hox genes?

Evolution: Duplicates provide only limited cover

Webwatch

Camera takes its shot

Gene expression: A not-so-passive spliceosome

AN INTERVIEW WITH...

Janet Rossant
Reviews

Biology by numbers: mathematical modelling in developmental biology

Claire J. Tomlin & Jeffrey D. Axelrod

Genetic determinants of cancer metastasis

Don X. Nguyen & Joan Massagué

Animal models of human disease: zebrafish swim into view

Graham J. Lieschke & Peter D. Currie

Gene function in mouse embryogenesis: get set for gastrulation

Patrick P. L. Tam & David A. F. Loebel
Hybrid necrosis: autoimmunity as a potential gene-flow barrier in plant species

Kirsten Bomblies & Detlef Weigel

p382

Perspective

Essay

The origin of eukaryotes: a reappraisal

Christian de Duve

p395

Correspondence

Correspondence: Loss-of-function genetic diseases and the concept of pharmaceutical targets

L. Ségalat

Author Reply: Loss-of-function genetic diseases and the concept of pharmaceutical targets
